

# Professional Support on Oracle E-Business Suite from Aspire improves manufacturer productivity

## Business Challenge

Our clients were facing increasing difficulty in automating and managing their manufacturing activities and well as a few related operations for their oracle applications (R 12.1.3). They were in need of an agile team that could take up the application support and help running the operations smoothly. Our clients selected Aspire Systems for their techno-functional support activities onsite.

## About Client

Our client is a joint venture between a Japanese and Indian firm. It manufactures and markets mid- to large-sized steam turbines and generators ranging from 500-megawatts (MW) to 1,000MW, for highly efficient super-critical thermal power plants in India. They have implemented Oracle Manufacturing, Distribution, Financials and Projects modules (Version 12.1.3)

## Our Solution

Some of the notable improvements that we brought to their ERP environment are as follows:

- The India localization issues that existed in their implementation were resolved by our team
- We engaged in restructuring their CoA values
- We migrated the legacy data from the IT Systems of their newly acquired unit

Other areas of our highly appreciated support team handled:

- Regular functional and technical issues were addressed for manufacturing, distribution, financials and projects modules
- New oracle report and xml reports were developed and existing reports modified to enable efficient and effective decision making.
- Period end closing support was provided to the clients

## Business Impact

We were able to prove our valuable contribution to the client in many ways. We helped them achieve a faster month end closing. We were able to reduce transaction processing time on account of quicker resolution of functional and technical issues and strengthen the applications by the overall enhancement activities.
